Here is the description of this YouTube video taken from Wikipedia:

See: [https://en.wikipedia.org/wiki/Pandora%27s\\_Promise](https://en.wikipedia.org/wiki/Pandora%27s_Promise)

***Pandora's Promise*** is a 2013 [documentary film](#) about the [nuclear power debate](#), directed by [Robert Stone](#). Its central argument is that [nuclear power](#), which still faces historical opposition from [environmentalists](#), is a relatively safe and clean energy source which can help [mitigate](#) the serious problem of [anthropogenic global warming](#).<sup>[2][3][4][5]</sup> In fact, according to records at the Paul Scherrer Institut in Villigen (Canton of Aargau), Switzerland, nuclear power has never caused a death in an OECD country. According to the report that [UNSCEAR](#) presented to the UN General Assembly in 2011, concerning [Chernobyl](#), that accident was responsible for 46 deaths. So nuclear power is not just "relatively safe," it is the safest-ever way to make electricity, by a very wide margin.

The title is derived from the ancient [Greek myth](#) of [Pandora](#), who released numerous evils into the world, yet as the movie's [tagline](#) recalls: "At the bottom of [the box](#) she found hope."
